Scientist – Late Stage Development (Req. 2014192)

At Boehringer Ingelheim we develop breakthrough therapies and innovative healthcare solutions in areas of unmet medical need for both humans and animals. As a family owned company, we focus on long-term performance.

The Late Stage Downstream Process Development is responsible for the development and characterization of a robust production process for biopharmaceutical molecules on a commercial scale, focusing on the purification process for our NBE portfolio.

With new technologies, we strive to advance existing processes with the aim of improving product quality, shortening development times and improving our process knowledge.

Would you like to support us with your expertise to advance this future topic within our company? Then we look forward to receiving your application!

Tasks & responsibilities

- In your new role, you are the Principal Investigator for Technology Development projects, including the scientific supervision of students and/or technical staff.
- You promote the development of novel in-silico technologies and drive forward the implementation of mechanistic modeling in downstream process development workflows.
- Your expertise enables you to deliver results on time and in high quality, including excellent communication with the management.
- You prepare and deliver technical and project-related presentations to internal and external project teams and decision committees.

Requirements

- Doctoral degree in Bioprocess Engineering, Biotechnology or equivalent with first relevant experience or master's degree with several years of industrial experience
- In-depth expertise in purification of biologicals and protein analytical methods
- Expert knowledge in mechanistic modeling of preparative chromatography
- Project management and project coordination skills with a focus on late stage development projects
- Excellent oral communication skills as well as sound technical writing and documentation competencies in English
