

# Support in development of Energy Management System software components

## Tasks

- Support development activities of energy management system for the project [BiFlow](#) : a real life multi-energy micro grid
- Programming
  - Energy Storage Controllers,
  - Machine Learning Optimization Algorithms
  - Forecasting algorithms
- Documentation of development done.

## Requirements

- Good programming skills and Code versioning with GIT
- Working knowledge of MATLAB / Simulink

## Scope

- 30 – 40 hours per month
- Employment duration for 3 months with extension possible

## Application

Please send your application to  
M.Sc. Lakshimi Narayanan Palaniswamy
